Description

The Series 8000 is a complete line of “All Stainless Steel” pressure and level transmitters for all industrial applications.

The compact and robust stainless steel housing is ideal for hygienic applications but also for harsh aggressive ambient conditions. The transmitters are fully temperature compensated. The Series 8000-SAN are both CIP and SIP cleanable and they fully meet the needs of the food and beverage, chemical, pharmaceutical and pulp & paper industries. Both series 8000 and 8000-SAN are equipped with very strong flush mounted diaphragms.

In order to be fully compatible with the process they are monitoring, all series 8000 units offer a wide range of process connections and a choice of wetted parts materials. All versions enjoy ATEX approval for Intrinsic Safe applications.
The series 8000 pressure transmitter has been specially designed for measuring pressure in pulp- and paper mills and similar industries where plugging is a problem. The transmitters are fully temperature compensated, and have very strong, flush mounted diaphragms. Zero and span are internally adjustable over wide ranges.

The series 8000 with G1” process connection are frequently used for pressure applications in the shipbuilding industry. Various Marine Type Approvals are available.

Specifications

- **Accuracy**: 0.2% of adjusted span
- **Measuring ranges**: 0 - 0.1 bar to 0 - 80 bar
- **Output signal**: 4 - 20 mA / 2-wire
- **Adjustment**: Zero and Span internally
- **Power supply**: 12 - 36 Vdc (ATEX: 13 - 26.5 Vdc)
- **Protection grade**: IP66 (IP68: option)
- **Process temperature**: -20 °C to +80 °C
- **Ambient temperature**: -30 °C to +70 °C
- **Wetted parts**: AISI 316L (standard)
- **Electronics housing**: AISI 304
- **Process connections**: See below. Also available: E+H, Vega, Rosemount connections. Specify X code (Detailed X code list available)

Process connections

- **Code: W**
  - Weld-on nipple diam 33 mm.
  - (Pulp and paper industry)

- **Code: X12**
  - PASVE connection

- **Code: S**
  - 1” BSP (G1”)

Dimensions (mm)

- **Code W**
  - Parts description W
    1. Cover: AISI 304
    2. O-ring: EPDM
    3. Venting: PA
    4. PG9 cable gland: AISI 304
    5. Electronics housing: AISI 304
    6. Extension: AISI 304
    7. Diaphragm and ring: AISI 316L
    8. M8 Bolt: AISI 304
    9. Weld on nipple, ø33 mm: AISI 316L
    10. O-ring: Viton
    12. Diaphragm (Code S): AISI 316L

- **Code S**
  - Parts description S
    1. Cover: AISI 304
    2. O-ring: EPDM
    3. Venting: PA
    4. PG9 cable gland: AISI 304
    5. Electronics housing: AISI 304
    6. Extension: AISI 304
    7. Diaphragm and ring: AISI 316L
    8. M8 Bolt: AISI 304
    9. Weld on nipple, ø33 mm: AISI 316L
    10. O-ring: Viton
    12. Diaphragm (Code S): AISI 316L

See page 6 for ordering code and ranges.
Series 8000-SAN

Description

The 8000-SAN series are designed for all pressure and level applications in the food and beverage, chemical and pharmaceutical industries. All hygienic process connections are available, most of them are EHEDG or 3-A certified.

The transmitters are fully temperature compensated and have very strong flush mounted diaphragms. They are both CIP and SIP cleanable. Zero and span are internally adjustable over wide ranges.

Specifications

- Accuracy: 0.2% of adjusted span
- Measuring ranges: 0 - 0.1 bar to 0 - 80 bar
- Output signal: 4 - 20 mA / 2-wire
- Adjustment: Zero and Span internally
- Power supply: 12 - 36 Vdc (ATEX: 13 - 26.5 Vdc)
- Protection grade: IP66 (IP68: option)
- Process temperature: -20 °C to +100 °C (145 °C / 45 min)
- Ambient temperature: -30 °C to + 70 °C
- Wetted parts: AISI 316L (standard)
- Electronics housing: AISI 304
- Process connections: All industrial process connections available (more than 40*)

Also available with separate (remote) electronics. Vented cable between process connection and SS electronics housing, type: 8000-SAN-CABLE.

Process connections

- Code: M Milkcoupling (DN 25, 40 or 50)
- Code: F Flange (DIN, ANSI or JIS)
- Code: W Weld-on nipple diam. 85 mm

*More than 40 different process connections available (Tri-clamp, SMS, IDF, 1 ½" BSP, Varivent, etc.)

Dimensions (mm)

See page 6 for ordering code and ranges.
The 'Peramic', series CER-8000, is a 'all stainless' pressure transmitter based on a ceramic measuring cell. The CER-8000 is fully temperature compensated and is made for all pressure applications in clean liquids, gases and vapours. The ceramic measuring cell can withstand high overpressures and is sealed by an o-ring (viton as standard, other materials on request). Zero and span are internally adjustable over wide ranges.

Specifications

- **Accuracy**: 0.2% of adjusted span
- **Measuring ranges**: 0 - 0.2 bar to 0 - 350 bar
- **Output signal**: 4 - 20 mA / 2-wire
- **Adjustment**: Zero and Span internally
- **Power supply**: 12 - 36 Vdc (ATEX: 13 - 26.5 Vdc)
- **Protection grade**: IP66 (IP68: option)
- **Process temperature**: -20 °C to +80 °C
- **Ambient temperature**: -30 °C to +70 °C
- **Pressure Sensor**: Ceramic Al₂O₃ / 96%
- **Sensor sealing**: Viton o-ring (standard) other materials on request
- **Other wetted parts**: AISI 316 (standard)
- **Electronics housing**: AISI 304
- **Process connections**: ½" BSPm or ½" NPTm

Process connections

- **Code: R**
  - 1/2" BSP (DIN 16288)
- **Syphon pipe** (option)
- **2-valve manifold** (option)

Dimensions (mm)

See page 6 for ordering code and ranges.
General information

Local Indicator
On all models, mentioned in this brochure, a digital local indicator is available (option). This 3½ digit indicator is adjustable and also available in ATEX Ex ia version (not adjustable).

Active temperature compensation
All Klay transmitters are fully temperature compensated. A temperature sensor, which monitors the process temperature, is mounted right behind the diaphragm. The output of this sensor is used to compensate the transmitter on process temperature variations.

Klay Flush Diaphragm Technology
All transmitters from series 8000 and 8000-SAN are equipped with the unique Klay Flush Diaphragm Technology including active temperature compensation. The diaphragms are laser welded and helium tested (gas tight) and therefore hermetically sealed. The diaphragms are extremely strong and standard polished and do have a backup system equal to the diaphragm structure, which results in a minimum oil filling. The standard material used for our flush diaphragms is AISI 316 L but other materials such as Hastelloy C, Tantalum or Gold plating can be supplied on request (option). For more information a detailed brochure is available.

8000-SAN-Cable
This version has been developed for applications where space does not allow easy adjustment of a compact model and for applications with a process temperature above 95°C continuously with a max. temperature of 140°C. The Pressure Sensor and electronics housing are physically separated but are joined by a “vented” cable. The zero and span can easily be set at a convenient mounting area while the actual sensor is measuring at the desired point. The standard cable length is 3 m. (Specify cable length in order code). In case of high temperature, this cable model can go up to 280°C continuously, specify HT in order code. (Only 8000-SAN-Cable types)

Compact electronics in a Stainless Steel Housing
The electronic transmitters from Klay Instruments contain a minimum number of electronic components. The signal conditioning is performed by a single integrated circuit which provides a very linear output. The electronics are mounted in a compact and robust stainless steel housing.

Certificates and options

ATEX Intrinsic safety
All transmitters mentioned in this brochure are certified for use in hazardous areas, according to ATEX II 1 G Ex ia IIC T4 Ga. Use only a certified power supply from 13 - 26,5 Vdc. Maximum values: Uᵢ = 26,5 Vdc, Iᵢ = 110 mA, Pᵢ = 0,9W, Lᵢ = 1mH and Cᵢ = 1nF.

For High Temperature Applications where the process temperature is continuously above 100°C, we manufacture transmitters with cooling fins to reduce the temperature (Series 8000-SAN with HT option) With a compact 8000-SAN transmitter with option HT we can go up to 180°C and with separation by a cable between process connection and electronics housing (Type: 8000-SAN-Cable-HT) we can go up to 280°C continuously! The HT option is only available on series 8000-SAN (except ranges B and C).
